

*Monthly flow percentages typically drop since the West Wildwood infiltration dominates our flow and other towns flows are dominated by their usage. The good news is the 2024 summer flows are dropping to the lows we saw in 2022.*

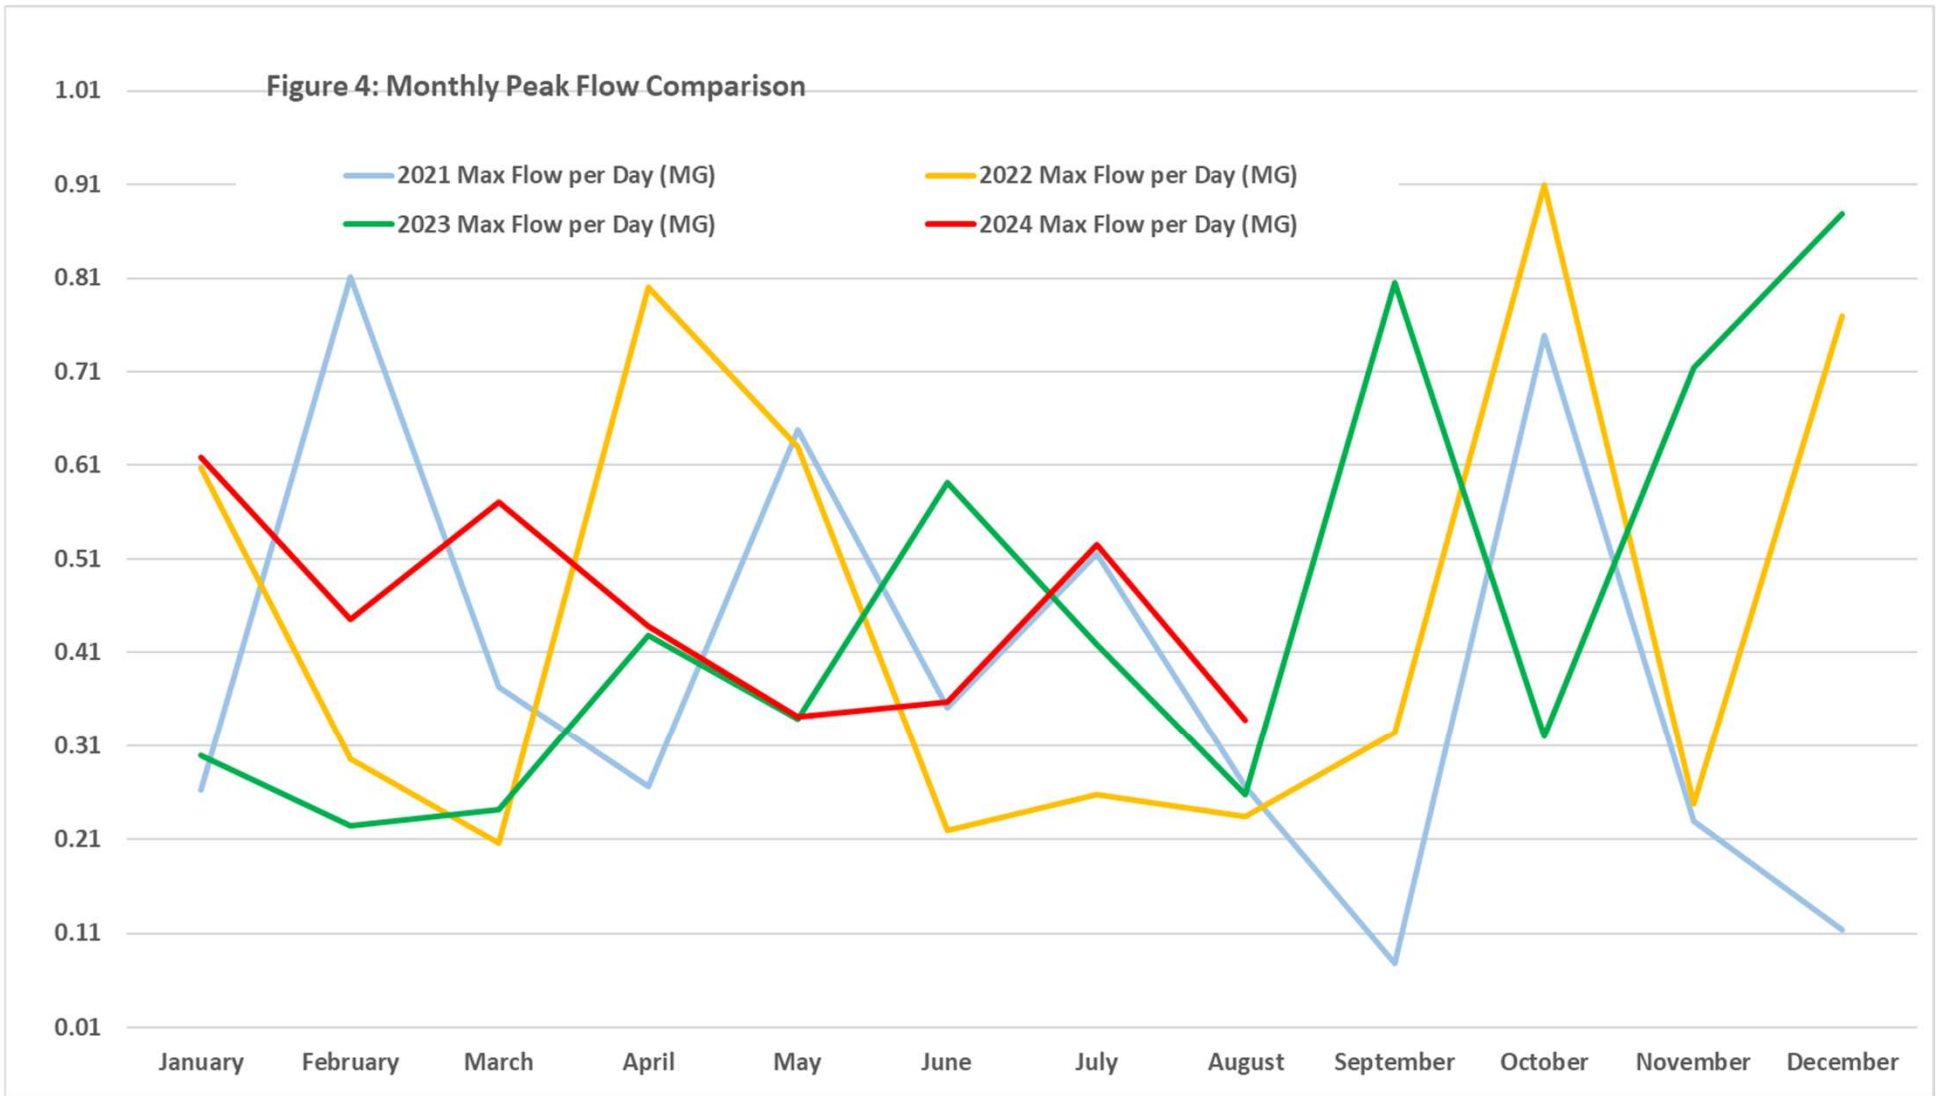

Figure 2: Total Flow % Comparison

*2024 Total flow percentages are continuing to trend lower. We trended similar to 2022 and are below the forecast potentially resulting in CMCMUA credit next year.*

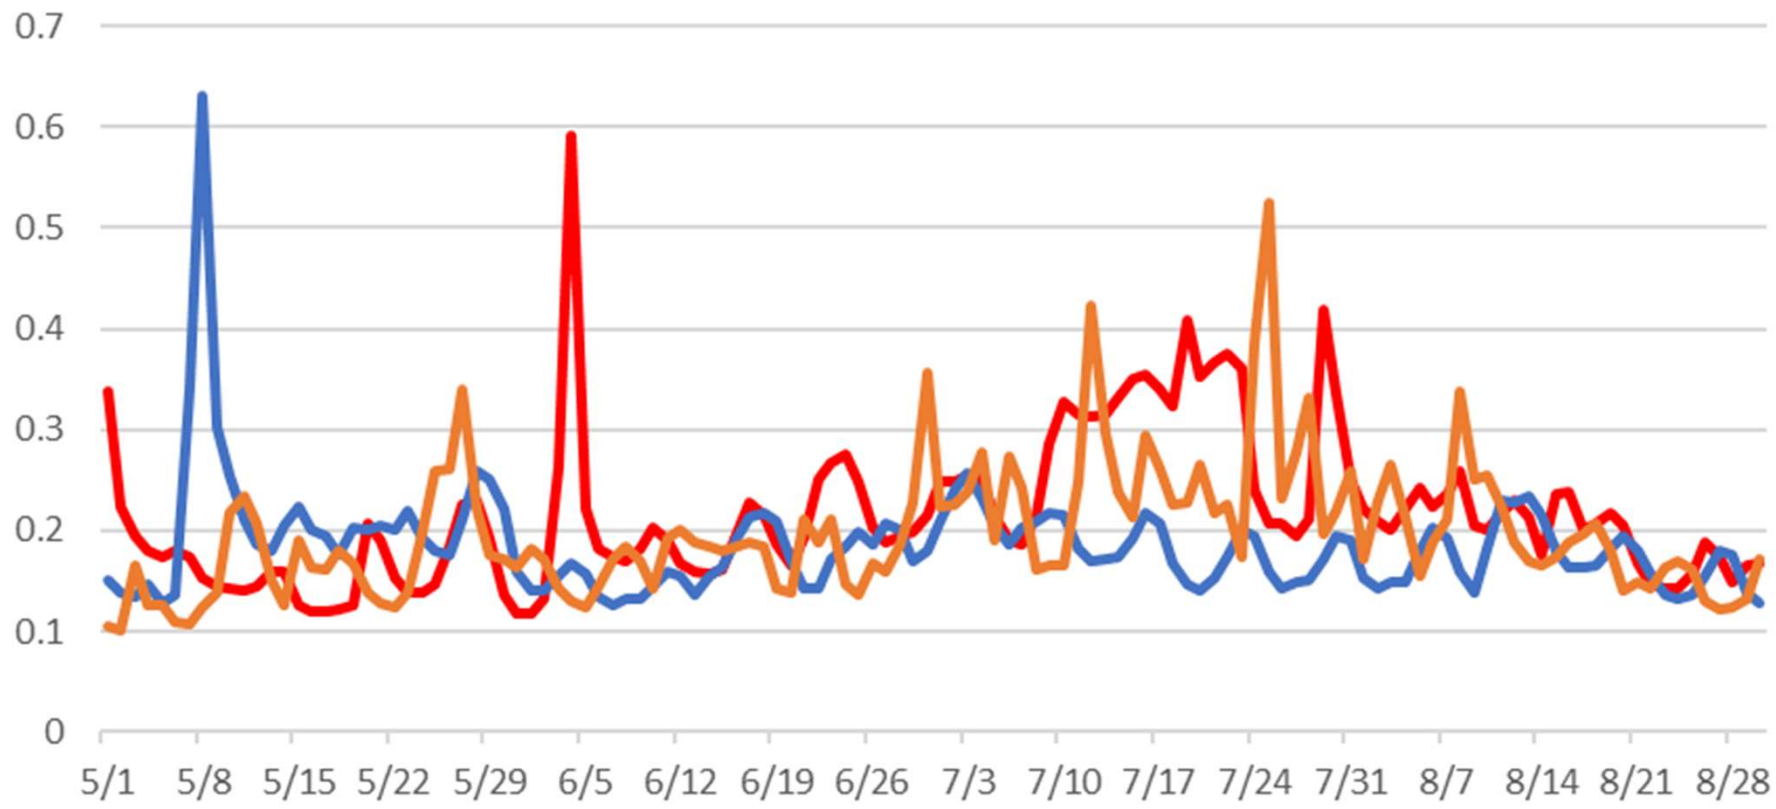

*Monthly average flows are reduced from prior years however they are really influenced heavily by a combination of rainfall and tidal flooding.*

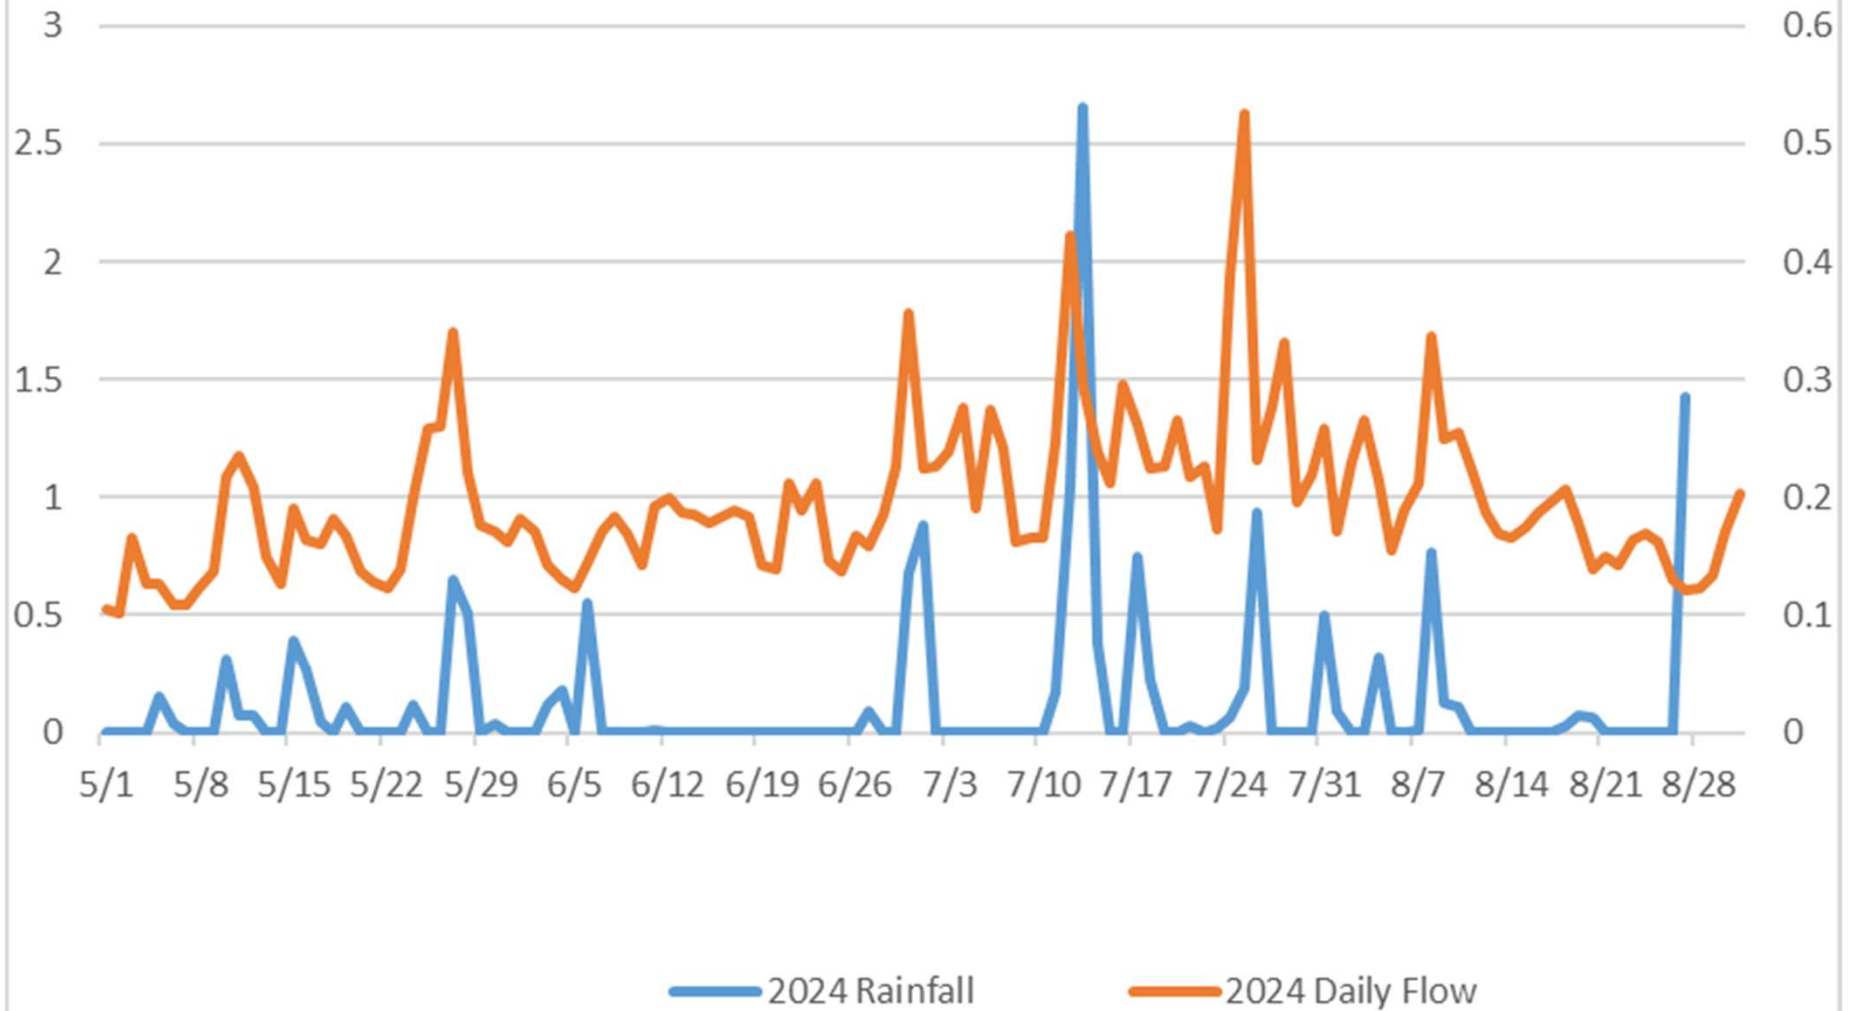

*Max flows continue to show significant improvement from prior years however, there are still significant repairs needed.*

# 2022-2024 Daily Comparison

— 2023 Flow — 2022 Flow — 2024

## 2024 Daily Flow/Rain Comparison
